

FOR IMMEDIATE RELEASE

Frontline® Introduces World's First *Bluetooth*® low energy Protocol Analyzer

Charlottesville, Virginia, USA –September 23, 2009 – Frontline Test Equipment is pleased to announce the release of the world's first protocol analyzer for the new *Bluetooth* low energy specification. Adoption of the *Bluetooth* low energy specification isn't planned until the end of 2009, but developers all over the world are already using Frontline's analyzer in the development of their new products and to get ahead of the competition.

Bluetooth low energy is a technology specifically designed for products that employ low data rates and require long battery life, as *Bluetooth* low energy consumes a fraction of the power of classic *Bluetooth*. The first *Bluetooth* low energy products are expected to be in the health, sports and fitness areas. Products employing *Bluetooth* low energy such as blood pressure monitors, temperature sensors, pedometers, remote controls and more should start seeing the light of day in 2010.

Developing *Bluetooth* low energy products require the right tools, and developers have been relying on Frontline's solid, reliable and easy to use analyzers for years. Building on our industry leading Basic Rate/EDR *Bluetooth* analyzer, FTS4BT™, Frontline brings their experience to *Bluetooth* low energy. The Frontline *Bluetooth* low energy Analyzer is an indispensable tool for developing products based on a new technology that is changing day to day. Frontline is constantly updating the *Bluetooth* low energy analyzer to reflect the latest changes in the spec, which keeps developers on top of the latest changes and helps them implement these changes in their designs.

About Frontline

Frontline is the world's leader provider of *Bluetooth* protocol analysis technology. Frontline's FTS4BT *Bluetooth* analyzer is the de-facto industry standard and is used by hundreds of company's globally including, CSR, Broadcom, Atheros, Apple, Nokia, Samsung, Sony, Toshiba, Panasonic, and Marvell. Frontline's technology has been integrated into the *Bluetooth* SIG's PTS qualification tool which is the system used to determine if a product meets *Bluetooth* interoperability standards. With the release of support for *Bluetooth* V3.0 + HS, Frontline now supports the entire range of *Bluetooth* technology: Basic Rate/Enhanced Data Rate, low energy, and High Speed.
